

Protocol

UITableViewDropItem

The data associated with an item being dropped into the table view.

Declaration

```
protocol UITableViewDropItem
```

Overview

When handling a drop, you get instances of this class from the [items](#) property of the [UITableViewDropCoordinator](#) object. Use them to retrieve the data for the items being dragged and to plan any animations related to dropping the items. You do not create instances of this class yourself.

Topics

Getting the Drag Item

var [dragItem](#): UIDragItem
The item that was dragged.
Required.

Getting the Item Information

var [previewSize](#): CGSize
The size of the drag item's preview.
Required.

var [sourceIndexPath](#): IndexPath?
The index path of the item in the table view, if any.
Required.
