

Class

# UICollectionViewFlowLayoutInvalidationContext

A set of properties for determining whether to recompute the size of items or their position in the layout.

## Declaration

```
class UICollectionViewFlowLayoutInvalidationContext : UICollectionViewLayoutInvalidationContext
```

## Overview

The flow layout object creates instances of this class when it needs to invalidate its contents in response to changes. You can also create instances when invalidating the flow layout manually.

## Topics

---

### Specifying What to Invalidate

```
var invalidateFlowLayoutDelegateMetrics: Bool
```

A Boolean indicating whether to recompute the size of items and views in the layout.

```
var invalidateFlowLayoutAttributes: Bool
```

A Boolean indicating whether to recompute the layout attributes for items and views in the layout.
