

UISwipeActionsConfiguration

The set of actions to perform when swiping on rows of a table.

Declaration

```
class UISwipeActionsConfiguration : NSObject
```

Overview

Create an instance of this class when you want to associate custom swipe actions with the row of a table. Typically, you create instances of this class in the `tableView(_:leadingSwipeActionsConfigurationForRowAt:)` or `tableView(_:trailingSwipeActionsConfigurationForRowAt:)` method of your table view's delegate.

Topics

Initializing the Swipe Actions

```
init(actions: [UIContextualAction])
```

Creates a swipe action configuration object with the specified set of actions.

Getting the Swipe Action Information

```
var actions: [UIContextualAction]
```

The swipe actions.

```
var performsFirstActionWithFullSwipe: Bool
```

A Boolean value indicating whether a full swipe automatically performs the first action.
