

Class

UITableViewFocusUpdateContext

A context object that provides information relevant to a specific focus update from one view to another.

Declaration

```
class UITableViewFocusUpdateContext : UIFocusUpdateContext
```

Overview

A focus update context provides extra information that is only relevant to focus updates involving table views. Instances of this class are ephemeral and are usually discarded after the update is finished.

Topics

Locating Focusable Items in a Table View

var [previouslyFocusedIndexPath](#): IndexPath?
Returns the index path of the cell containing the context's previously focused view.

var [nextFocusedIndexPath](#): IndexPath?
Returns the index path of the cell containing the context's next focused view.
