Class

UIContextualAction

An action to display when the user swipes a table row.

Declaration

```
class UIContextualAction : NSObject
```

Overview

Create instances of this class to define the types of actions that can be performed when the user swipes left or right on a table row. Use your actions to initialize a UISwipeActions Configuration object in your table view delegate object.

Topics

Creating the Contextual Action

init(style: UIContextualAction.Style, title: String?, handler: UIContextualAction.Handler)
    Creates a new contextual action with the specified title and handler.

Configuring the Appearance

var title: String?
    The title displayed on the action button.

var backgroundColor: UIColor!
    The background color of the action button.

var image: UIImage?
    The image to display in the action button.

Getting the Configuration Details

`var ` `handler`: `UIContextualAction.Handler`

The handler block to execute when the user selects the action.

`typealias ` `UIContextualAction.Handler`

The handler block to call in response to the selection of an action

`var ` `style`: `UIContextualAction.Style`

The style that is applied to the action button.

`enum ` `UIContextualAction.Style`

Constants indicating the style information that is applied to the action button.
